

Drum Pulleys

Engineered for Performance. Built to Last.

Built to Handle the Toughest Jobs: Fabricated from heavy schedule pipe, Luff Drum Pulleys are made to endure extreme loads and harsh environments; delivering unmatched strength and reliability.

Durability That Goes the Distance: With a pulley shell up to 50% thicker than standard, these pulleys absorb more stress and resist wear, helping your system run longer with less downtime.

Precision You Can Count On: A large machined trapezoidal crown angle ensures perfect pulley concentricity and exceptional belt tracking, keeping your operation smooth and aligned.

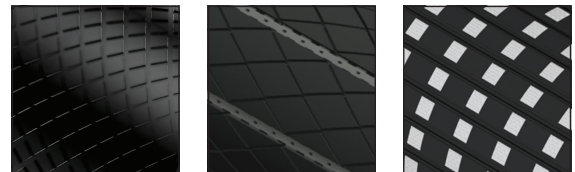

A variety of lagging options are available, including diamond grooved SBR, weld on slide lagging and ceramic lagging.

Maximum concentricity:

- » Increases belt contact and minimizes slippage
- » Accurate tracking reduces misalignment and wear
- » Less vibration, quieter operation and reduced stress on bearings
- » Minimal maintenance keeps your system running smooth

Self-Cleaning Power with Constant Contact: Optional spiral drum pulleys provide a built-in cleaning action while maintaining steady belt contact.
